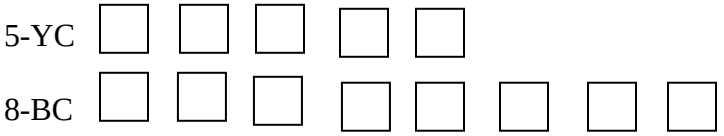
Parent Help Card
Comparing

There are 5 yellow chicks and 6 brown chicks. How many more brown chicks than yellow chicks?

Step One: Read the problem and circle the important numbers.

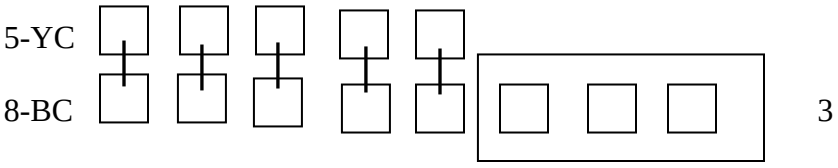
There are (5) yellow chicks and (8) brown chicks. How many more brown chicks than yellow chicks?

Step Two:
Draw and label your picture. (YC- for yellow chicks and BC- for brown chicks)

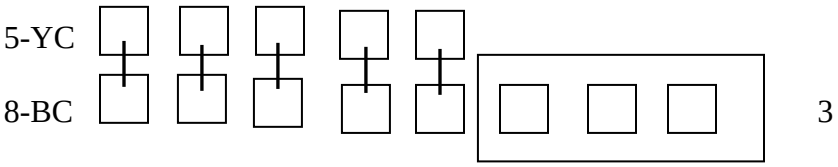


Note: It is very important to draw the squares neatly and directly across from each other- we say, “Make your dancing partners look at each other”.

Step Three: Now draw lines to make your partners, then “box” in and label the difference (whoever doesn’t have a dancing partner).



Step Four: Write your number sentence.



8-5=3
