

# Patterns

Use **TEETH** strategy to find the next numbers in a pattern. Continue the pattern at least 3 to 4 numbers when comparing to answer choices.

Find the missing numbers:

## STEPS:

1. Draw teeth between the #'s.
2. Write the operation under each tooth.
3. Look for a pattern. + 2 then -1
4. Continue pattern to find the next several numbers.

## Example:

Mary decided to put any rocks that she found in a jar. On the first day, she put 2 rocks in the jar. On the second day, she put 5 rocks in the jar. On the third day, she put 8 rocks in the jar. If the pattern continues, how many **rocks were in the jar by the end** of the sixth day?

A. 14

B. 17

C. 40

D. 57

2

5

8

11

14

17

+ 17

---

57
