

Warm - Up

Allison made 163 party bags for the carnival. She divided up the bags evenly into 5 boxes with each box having the same number of bags. How many party bags did she have left over?

Division – 2 digit divisors

The tire warehouse produced a total of 264 tires on Saturday morning. They were to be sent by truck to 12 locations across town. Each store was to receive the same number of tires. How many tires did each store receive?

Mike was putting his bucket of 327 nails into 15 individual bags. He wanted each bag to have the same number of nails. How many nails went into each bag?

Mr. Brown split up his 275 marbles among the 25 students in the class. If each student would receive the same number of marbles, how many marbles would one child get?

- The PTO made 246 paper flowers to decorate for the 5th grade graduation. They wanted to put an equal number of paper flowers on each of the 22 tables. The leftover flowers would be given to the teachers. How many flowers would be put on each table?
